

# GREEN DISPOSABLES

**CHOOSE THE PLANET OVER PLASTIC!**

## From zero to zero in 84 days!

The Tellus process starts and ends with the earth. 100% compostable & guilt-free products.

Tellus products decompose faster than other materials put in the earth. When you compost the tableware, organic material is broken down using heat, water and oxygen. Our products fertilize and improve the soil, while reducing the earth's trash.

Tellus upcycles sugarcane fiber (known as bagasse) to create innovative plates, bowls, and takeout containers that compost back into the earth in 84 days in a commercial composting facility.

The team at Bay West Caribbean has selected the best of the best for you and knows everything about Tellus products to help you select the right solution for your situation.

*Prices on the final quotation are leading.*
